4. Project Information

Area *

Exploratory Data Analysis & Statistical Visualization

Topic *

Wage Determinants and Disparities in the Indian Labor Market

Problem Definition *

In India, it's obvious that things like gender, education level, and whether a job is formal or informal have a huge impact on a person's salary. But it's really difficult to measure exactly how much these factors matter just by looking at standard reports or raw survey numbers. Our project focuses on taking raw PLFS government data and applying EDA techniques to it. By cleaning the data and building proper statistical visualizations, we want to clearly show the actual earning trends and wage gaps that exist in the current labor market.
